EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Doyle Johnson on February 18, 2005.

2. The application has been amended as follows:
 - a. Claim 23: line 9, change "a current source transistor connected to the input transistor;" to "**a current source transistor connected to the photodetector;**"

Drawings

3. New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because the parts labeled are not legible. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

4. The following is an examiner's statement of reasons for allowance:

The following prior art shows the current state of the art to this patent application:

Art Unit: 2615

i. Stineman Jr. (US Patent # 4,794,247) discloses an amplifier (figure 1) in which a photodetector 101 is connected to an output of a feedback reset transistor 102. An amplifier comprising current source 116 and a cascode transistor 105 among other elements is connected to the output of the photodetector. The office notes that Stineman Jr. does not disclose an adaptive skimming circuit having an integration capacitor and a pixel reset transistor connected to the current source transistor and the adaptive skimming circuit, which is the core of the applicants' invention.

ii. Levy (US Patent # 6,147,340) shows a photodetector, a current source 12 and an adaptive skimming circuit. Levy does not disclose a feedback enhanced amplifier.

As can be seen, the prior art does not teach or reasonably suggest a system for a feedback enhanced reset amplifier, the amplifier comprising a detector reset transistor; a photodetector connected to an output of the reset amplifier; and a high-gain amplifier connected to the photodetector, the high-gain amplifier transistor comprising: a current source transistor connected to the photodetector, an adaptive skimming circuit having an integration capacitor; and a pixel reset transistor connected to the current source transistor and the adaptive skimming circuit.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
